***Statement of Reasons for Allowance***

1. An Examiner's statement of reasons for allowance to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment maybe filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

2. Claims 1-2, 7-9, 12-17, 20-25 and 28-31 are allowed.

3. The following is an examiner's statement of reasons for allowance:

In interpreting the claims, in light of the specification, the examiner finds the claimed invention to patentably distinct from the prior art of record.

Murphy, Jr. et al. (US 6,070,245) teaches the invention substantially as claimed. Murphy teaches a system and method for controlling encryption on or off during a connection oriented session between a client and a server over the Internet/Intranet, wherein a first subsystem generates presentation data (*i.e.*, 5250 data stream) via a first data protocol and a component for encoding data other than presentation data (*i.e.*, user data) within the first data protocol via the second data protocol (*i.e.*, user data in the form of HTML is inserted into the 5250 data stream) (See Murphy, C3: L52-64).

However, the prior art of record fails to teach or suggest individually or in combination that a method and system for sending and receiving status information from a first computer system to a second computer system over an existing communication link, comprising: a first subsystem generating presentation data via a first data protocol; ***encoding, in a predefined format, status information relating to a first subsystem within a first data protocol via a second data protocol that utilizes XML data; and encapsulating the encoded status information to isolate the second data protocol from the first data protocol to mitigate disruption of the presentation data*** as set forth in independent claims 1, 15, 23 and 29, which is achieved without affecting previous/currently transmitted system display information and effectively maintaining protocol semantics for backward compatibility. By encapsulating and encoding the second data protocol within the formatted data, another computer system may receive the second data protocol to log, detect and analyze status information or errors without affecting/disrupting ongoing presentations of the formatted data (See specification, page 3, paragraphs 2-3).

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
